

OmniVoice Offline Installation Guide (Windows)

System

- CPU: Intel Core i3-9100
 - RAM: 12 GB
 - Storage: SSD
 - OS: Windows 11
-

Step 1: Clone Repository

Open Command Prompt:

```
cd C:\Windows\System32
git clone https://github.com/k2-fsa/OmniVoice.git
cd OmniVoice
```

Step 2: Create Virtual Environment

```
python -m venv venv
```

Activate:

```
venv\Scripts\activate
```

You should see:

```
(venv) C:\Windows\System32\OmniVoice>
```

Step 3: Install OmniVoice

IMPORTANT:

Do NOT run:

```
pip install -r requirements.txt
```

Reason:

```
ERROR: Could not open requirements file
```

This repository uses:

```
pyproject.toml
```

instead of requirements.txt.

Install using:

```
pip install -e .
```

Installation may take 15–45 minutes depending on internet speed.

Step 4: Install FFmpeg

Required for audio processing.

Run:

```
winget install Gyan.FFmpeg
```

Accept agreement:

```
Y
```

Verify installation:

```
ffmpeg -version
```

If version information appears, FFmpeg is installed correctly.

Step 5: Start OmniVoice

Activate venv:

```
cd C:\Windows\System32\OmniVoice  
venv\Scripts\activate
```

Launch:

```
python -m omnivoice.cli.demo
```

Step 6: First Launch

First launch downloads model files.

Approximate download:

```
3.27 GB
```

CPU detected:

```
device=cpu
```

Download happens only once.

Step 7: Open Web UI

When startup completes:

```
Running on local URL:  
http://0.0.0.0:7860
```

Open browser:

```
http://localhost:7860
```

or

```
http://127.0.0.1:7860
```

Daily Usage

Activate:

```
cd C:\Windows\System32\OmniVoice  
venv\Scripts\activate
```

Start:

```
python -m omnivoice.cli.demo
```

Open:

```
http://localhost:7860
```

One-Click Start

Create file:

```
Start_OmniVoice.bat
```

Content:

```
@echo off  
cd /d C:\Windows\System32\OmniVoice  
call venv\Scripts\activate
```

```
start http://localhost:7860  
python -m omnivoice.cli.demo
```

Double-click to start OmniVoice.

One-Click Stop

Create:

```
Stop_OmniVoice.bat
```

Content:

```
@echo off  
taskkill /F /IM python.exe
```

Double-click to stop OmniVoice.

Notes

- First startup downloads model.
 - Later startups use cached model.
 - No need to re-download.
 - Terminal window must remain open while OmniVoice is running.
 - Performance on i3-9100 CPU is slower than GPU.
 - Voice generation works locally after model download.
-

Useful Commands

Check FFmpeg:

```
ffmpeg -version
```

Check current folder:

```
echo %cd%
```

Check running Python:

```
tasklist | findstr python
```

Check port:

```
netstat -ano | findstr 7860
```
